Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Malmros (US 5,372,801) in view of Bernal, et al. (Science, Vol. 222, 8/1983).

Malmros discloses a method of detection of epithelial cancers comprising administering a dye, the fluorescent dye, toluidine blue O, see abstract and column 2. Malmros also discloses the use of the leuco form of this dye and an acceptable oxidizing agent in column 8 claim 4. Note that toluidine blue O is a mitochondrial marking agent yielding a high affinity for cancerous tissues, as rhodamine is specifically defined on page 5 paragraph 2 of the instant specification. Thus, this dye would be expected to inherently meet the functional limitations set forth for the instant claims and would have the same properties as defined for toluidine blue O. Malmros fails to teach the specific dye rhodamine claimed in the instant claims.

Bernal (Science, Vol. 222, 8/1983) discloses a method of in vivo detection of cancerous epithelial cells comprising administering a cationic mitochondrial marking agent (Rh123) and detecting cancerous cells, see abstract. It is obvious that rhodamine was a dye well known in the art for the visualization and staining of precancerous and cancerous tissues and therefore would be an obvious choice of dyes to use in for the techniques disclosed by Malmros. It would have been obvious to one of ordinary skill in

the art to modify the methods used by Malmros to include the cancer staining dye rhodamine disclosed by Bernal, et al.
